

# practico alu plus

This bed for every need combines technology and cosiness.

Perfectly suited for care.

.bock<sup>®</sup>///

## The up-to-date low nursing care bed

- // Height adjustable from 25 – 80 cm
- // Ergonomic backrest to support a physiological sitting position
- // Side rails that automatically extend
- // Genuine, tool-free bed extension without any need to replace parts accomplished in an instant
- // Cosiness and technology perfectly combined

**NEW!**  
Developed  
by bock!

Sophisticated technology and the perfect look:  
the telescopic side rail for standard and special lengths

# Invigorating innovations: perfect for professional care

The ergonomic lying surface supports a physiological sitting position, as the body bends at the hip joint when the torso is elevated. The generous support surface on the back increases the sense of security residents experience and their field of visual perception.

Caregivers also enjoy more ergonomic working positions and have an easier time mobilising residents.

The practico alu plus is a bed for every need that combines technology and cosiness. It can be extended without any tools to 220 cm, ensuring a custom fit for residents. A genuine, fully ergonomic extension of the lying surface is accomplished in an instant. What's more, the telescopic side rail extends automatically with the lying surface. Technically engineered down to the last detail with uncompromising comfort.

### Save time and money:

Extend the practico alu plus by 20 cm in no time at all. The high-quality side rails extend automatically – all without any need to replace parts or use any tools, of course.

# A bed for every need: practico alu plus

- // Made from high-quality aluminium
- // Individual motors for top reliability
- // Intelligent LED lighting system
- // Many different designs and configurations
- // Hand control with disabling function

## Elegant, contemporary design:

The practico alu plus offers different end panels to choose from, including elegant wood/aluminium combinations and all-wood panels. Each end panel is available with bed linen storage and bumpers.

**Pressure-relieving, economical and hygienic:**  
The flexible ripolux® lying surface system can be adjusted to meet the personal needs of patients without any tools and creates lying surfaces that relieve pressure while providing ideal ventilation and a long service life. Perfect for large and small, heavy and light patients.

**Design and functionality in perfect harmony:**  
The stable wheel covering boasts an elegant design and sophisticated construction with a central braking system for safely and securely locking all four double castors at the same time.

**Intelligent LED lighting system:**  
The LED technology in the reading lamp and under-bed lighting is integrated into the bed's electronics and can be operated using the hand control. That makes it easy to use and provides reliable orientation for the patients – all without an additional mains connection!

## Custom interior planning

Interior design solutions from bock offer a wide range of options in terms of style, variety, custom-made models, additional functions and optional aids.

Our team never stops working on sophisticated solutions to make everyday patient care easier for you in a targeted manner. That is why we engage in dialogue with professional teams of caregivers – and take feedback seriously!

The result? Quality, functionality, comfort and open systems that provide you with the perfect set-up today and ensure you enjoy all of the options in future as well.

No matter whether you want to upgrade or retrofit, exchange front panels or change colours!
